

Yohannes Belai

Olney, MD • yohannesbelai4@gmail.com • 443-859-0918 • github.com/ybelai2

TECHNICAL SKILLS & COMPETENCIES

Languages: Java, Python, JavaScript, TypeScript, SQL

Web & Backend: HTML/CSS, React, Vite, Tailwind CSS, Node.js, Express.js, Spring Boot, REST APIs, JWT, OAuth2

Databases: PostgreSQL, MongoDB (schema design, indexing), SQLite

Tools: Git, GitHub, Apache POI, Visual Studio Code, Emacs

Core Competencies: Data Structures & Algorithms, Object-Oriented Programming, Software Engineering, Operating Systems, Web Application Development, Database Concepts

EDUCATION

Bachelor of Science, Computer Science — Towson University, Towson, MD **May 2027**

Current Coursework (Fall 2026): Database Management Systems, Data Communications & Networking, Ethical & Societal Computing

Associate of Science, Computer Science — Montgomery College

RELEVANT EXPERIENCE

Software Developer (Contract), Alignerr, Remote Aug 2025 – Present

- Evaluated AI-generated programming solutions in Java and Python for algorithmic correctness, logical flow, and adherence to task requirements and coding principles.
- Conducted code reviews to identify logical bugs, edge-case failures, implementation issues, and potential vulnerabilities within structured programming tasks.
- Authored detailed technical evaluations and structured feedback to support the quality and accuracy of AI training and evaluation datasets.

Primary Teacher & Teaching Assistant (Intern), Tech Education Programs Jun 2026 – Aug 2026

- Taught foundational programming logic, object-oriented programming, and algorithm design to 20+ students using Python and MIT App Inventor.
- Conducted code reviews for student projects, resolved live technical blockers, and provided actionable feedback on code clarity and design patterns.

PROJECT EXPERIENCE

Drill Live

- Engineered a full-stack study platform using Spring Boot and React to process multi-file PowerPoint uploads and extract textual data with Apache POI.
- Integrated the Google Gemini API to transform extracted text into JSON-formatted flashcards and quizzes using structured prompt designs.

SyllabiXtract

- Developed a React frontend with Vite and Tailwind CSS supporting multi-file asynchronous uploads and real-time progress indicators.
- Implemented OAuth2 authentication through Auth0 and integrated authenticated frontend workflows with REST APIs.

Campus Events API

- Designed and implemented 12 RESTful endpoints with Node.js and Express for event scheduling and user registration.
- Implemented JWT authentication, bcrypt password hashing, and role-based access control for admin, organizer, and user permissions.
- Structured MongoDB schemas and applied indexing to support queries involving event dates and user status.
