

# YOHANNES BELAI

Olney, MD | 443-859-0918 | yohannesbelai4@gmail.com | linkedin.com/in/yohannesbelai/ | github.com/ybelai2

## EDUCATION

### Towson University

Bachelor of Science in Computer Science

Expected May 2027

Towson, MD

### Montgomery College

Associate of Science in Computer Science

May 2025

Rockville, MD

## TECHNICAL SKILLS

**Languages:** Java, Python, TypeScript, JavaScript, SQL

**Backend & Cloud:** Spring Boot, Node.js, Express, AWS (Lambda, S3, SQS), RESTful APIs

**Frontend & Databases:** React, Vite, Tailwind CSS, PostgreSQL, MongoDB, SQLite

**Tools:** Git, GitHub, Docker, Render, Vercel, VS Code

## EXPERIENCE

### Alignerr

Software Developer (Contract)

August 2025 – Present

Remote

- Evaluated AI-generated Java and Python software solutions for algorithmic correctness, logical flow, and edge cases by applying advanced data structures and OOP principles.
- Conducted technical code reviews to identify logical defects, implementation issues, and potential security vulnerabilities, providing actionable feedback to improve code reliability.

### Summer Technology Program

Intern Instructor & Teaching Assistant

July 2026 – August 2026

DMV Area

- Mentored 20+ students in mobile application development, integrating artificial intelligence APIs into student projects.
- Led intermediate Python programming sessions, teaching fundamental data structures, algorithms, and OOP concepts.

## PROJECTS

### Drill (AI Study Material Generator) / Java, Spring Boot, React, Gemini API, Render

- Architected a full-stack application that parses Apache POI PowerPoint presentations to generate automated flashcards and quizzes.
- Integrated the Google Gemini API to process extracted text and deployed the backend microservices on Render with a Vercel frontend.

### VeriSource (Secure RAG Gateway) / Python, LLM APIs, Vector Databases

- Developed a secure Retrieval-Augmented Generation (RAG) gateway to ensure accurate, context-aware AI outputs utilizing vector embeddings.

### Campus Events API / Node.js, Express, MongoDB, JWT

- Engineered a RESTful backend service featuring 12 secure endpoints for comprehensive event management and scheduling.
- Implemented Role-Based Access Control (RBAC) via JWT authentication, ensuring secure data access for simulated concurrent users.

### SyllabiXtract / React, Tailwind CSS, Auth0, TypeScript

- Built a dynamic web application that extracts assignment deadlines from course syllabi and formats them into an interactive calendar view.
